Dale S. Bryson

TO: William H. Sanders III
Director
Surveillance & Analysis Division

US EPA RECORDS CENTER REGION 5

482108

Confirming the conversation between Mr. Leon Acierto of my staff and Mr. A.R. Winklhofer, Eastern District Office, on February 12, 1980, I am requesting that a priority reconnaissance inspection of the above-referenced facility be conducted as soon as possible.

There is very limited information about this facility at the present time. The facility, located at the corner of Lycaste and Froid Roads, Detroit, Michigan, is known to be one of the assets of Chem-Dyne.

The inspection should determine (a) the general condition of the facility; (b) the significant facility operations including identities and approximate amount of chemicals in the facility, if any, that may present imminent hazard conditions; (c) assess the environmental damage, if any, caused by the facility, especially to nearby streams, drinking water wells, and the health of nearby residents.

If you have any questions about the inspection please contact Mr. Leon Acierto at (312) 353-2110. If you have any problem getting entry into the property, please contact Mr. Jonathan McPhee at (312) 353-2094.

Thank you for your assistance.

cc: Winklhofer, EDO
Ross, CRL
